Abstracts

According to our (Global Info Research) latest study, the global Multi-cavity Molds market size was valued at US\$ 463 million in 2024 and is forecast to a readjusted size of USD 741 million by 2031 with a CAGR of 7.0% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Multi-cavity molds are molds used to manufacture high-precision, high-transparency optical components. They are made by processing raw materials into specific shapes and sizes, then injecting molten materials (such as glass, plastic, etc.) into the mold to solidify and form the required optical components, such as lenses, prisms, etc. These optical components are widely used in photography, communications, medical treatment, scientific research and other fields.

Unlike single-cavity molds that produce one part per cycle, multi-cavity molds have multiple identical cavities, enabling the simultaneous production of multiple parts in a single injection molding cycle. This significantly increases production output and efficiency, allowing for higher volumes of parts to be produced in a shorter period. Multi-cavity molds are an excellent approach to increasing production efficiency and output.
