A multi-chamber washer disinfector is an advanced cleaning and sterilization system used in healthcare, pharmaceutical, and laboratory environments to automate the cleaning, disinfection, and drying of instruments and equipment. Unlike single-chamber units, a multi-chamber washer disinfector consists of several interconnected chambers, each designed to perform a specific stage of the cleaning process. These typically include an initial pre-wash, followed by main washing, disinfection, and final drying stages. The separation of these stages allows for a more controlled and effective cleaning process, where items are exposed to optimal conditions for each phase, including high-pressure water, detergents, disinfectants, and thermal disinfection (steam or heated water). Multi-chamber systems are ideal for handling larger volumes of items and ensuring consistent and thorough decontamination in environments where hygiene and infection control are paramount.
