According to our (Global Info Research) latest study, the global Monoclonal Antibodies market size was valued at USD 108850 million in 2023 and is forecast to a readjusted size of USD 145840 million by 2030 with a CAGR of 4.3% during review period.

Monoclonal antibody therapeutics is a type of immunotherapy in which monoclonal antibodies are used so that they can bind monospecifically to specific cells and proteins.

This treatment stimulates the immune system of patients to attack the foreign cells which cause the disease. Monoclonal antibodies are produced by using hybridoma technology. In hybridoma technology, the antibodies are obtained by fusion of human spleen cells and human myeloma. The characteristics of monoclonal antibodies which affect their efficacy are antigen specificity, overall structure and the affinity of the antibody for the target antigen or cells.
