According to our (Global Info Research) latest study, the global Multi-channel Temperature Data-loggers market size was valued at US\$ 937 million in 2025 and is forecast to a readjusted size of US\$ 1190 million by 2032 with a CAGR of 3.5% during review period.

A multi-channel temperature data logger is a device that can simultaneously measure and record temperature at multiple locations or from multiple sensors. Unlike single-channel data loggers, which can only monitor one temperature point at a time, multi-channel loggers are equipped with multiple input channels, each capable of connecting to a separate temperature sensor. This allows them to collect temperature data from various points in a system or environment.
