According to our (Global Info Research) latest study, the global Multi-component Slow-Release Fertilizer market size was valued at US\$ 8889 million in 2025 and is forecast to a readjusted size of US\$ 12210 million by 2032 with a CAGR of 4.7% during review period.

?Multi - component Slow - Release Fertilizer? is a kind of fertilizer. 'Multi - component' indicates that it contains a variety of nutrient components. These components generally include three macronutrients such as nitrogen (N), phosphorus (P), and potassium (K), as well as micronutrients such as iron (Fe), manganese (Mn), zinc (Zn), copper (Cu), boron (B), and molybdenum (Mo). 'Slow - Release' means that the nutrients in the fertilizer can be slowly released into the soil environment at a certain rate over a period of time for plant absorption and utilization. This kind of fertilizer can effectively reduce the loss of nutrients due to leaching, volatilization, etc., and better match the nutrient supply of the fertilizer with the growth requirements of plants.
