## Abstracts

According to our (Global Info Research) latest study, the global Multi-core High Temperature Cable market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

A cable is a group of insulated or stranded wires. It can have two or more strands. While a single core cable has only one wire, a multicore industrial cable comes with two or more wires. Ordinary cables are prone to insulation aging and scorching at high temperatures, and the cables lose their performance and cannot be used due to damage. The high temperature cable can work normally and stably at the rated high temperature, the signal or power transmission performance will not be affected, and it can also ensure that the cable has a long service life.
