The global Multi-core High Temperature Cable market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A cable is a group of insulated or stranded wires. It can have two or more strands. While a single core cable has only one wire, a multicore industrial cable comes with two or more wires. Ordinary cables are prone to insulation aging and scorching at high temperatures, and the cables lose their performance and cannot be used due to damage. The high temperature cable can work normally and stably at the rated high temperature, the signal or power transmission performance will not be affected, and it can also ensure that the cable has a long service life.

This report studies the global Multi-core High Temperature Cable production, demand, key manufacturers, and key regions.
