According to our (Global Info Research) latest study, the global Multi-Core Shielded Cable market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Multi-core shielded cable is a kind of cable commonly used in electrical and electronic equipment. It consists of multiple wires and insulating layers, and a metal shielding layer is covered outside the entire cable for anti-interference protection.

Multi-core shielded cables are usually used in occasions that require low signal interference and strong anti-interference performance. Each of its wires is isolated by an insulating layer and will not interfere with each other, and the metal shielding layer can effectively prevent electromagnetic wave interference and noise. Multi-core shielded cables can use different numbers and specifications of wires to meet the needs of different application scenarios. For example, some high-speed digital signal transmissions require the use of high-quality multi-core shielded cables for connection.

Multi-core shielded cables are suitable for various fields, such as computer network, data communication, control system, instrumentation, audio and video equipment, etc. Common types of multiconductor shielded cables include twisted pair cables, coaxial cables, flat cables, round cables, and more.
