## Abstracts

According to our (Global Info Research) latest study, the global Multi-core Stainless Steel Precision Filter market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The stainless steel filter is composed of a shell, a multi-element filter element, a backwashing mechanism, and a differential pressure controller. There are multiple filter elements, which makes full use of the filter space and significantly reduces the volume of the filter, and a backwash suction cup is installed in the lower chamber. When working, the turbid liquid enters the lower cavity of the filter through the inlet, and enters the inner cavity of the filter element through the baffle hole. The impurities larger than the gap of the filter element are retained, and the clean liquid passes through the gap to the upper cavity, and finally is sent out from the outlet.
