Abstracts

According to our (Global Info Research) latest study, the global Multi-Cylinder Gelato Machine market size was valued at US\$ 278 million in 2025 and is forecast to a readjusted size of US\$ 427 million by 2032 with a CAGR of 6.3% during review period.

Multi-cylinder gelato machine is a specialized equipment equipped with two or more independent freezing cylinders. Each cylinder can be independently controlled for refrigeration and churning, enabling the simultaneous or alternating production of different flavors of gelato. Their core function is to integrate multiple complete freezing units into one machine, allowing operators to produce multiple flavors simultaneously without interference. This solves the core problems of insufficient capacity and low output efficiency of single-cylinder equipment in high-traffic commercial settings, as well as the high equipment cost and large space occupation caused by purchasing multiple single-cylinder machines to produce multiple flavors. It significantly improves production flexibility and overall operational efficiency in commercial environments. The upstream supply chain mainly includes high-power multi-parallel compressor systems, independent refrigeration circuit components, high-precision multi-channel temperature control modules, and large-capacity food-grade stainless steel cylinders. The downstream primarily targets high-traffic professional gelato shops, large chain restaurants, hotel kitchens, and central kitchens, typically selling and providing installation and maintenance services through professional catering equipment dealers. In 2025, the production of multi-cylinder Italian gelato machines will be approximately 180,000 units, with an average price of approximately US\$1,500 per unit, a gross profit margin of approximately 40%, and a single-line capacity of 2,000 units per year.
