According to our (Global Info Research) latest study, the global Multi-disease Fundus Imaging-assisted Diagnostic System market size was valued at US\$ 1919 million in 2025 and is forecast to a readjusted size of US\$ 3344 million by 2032 with a CAGR of 8.3% during review period.

Multi-disease Fundus Imaging-assisted Diagnostic System refers to medical software that uses artificial intelligence technology, especially deep learning algorithms, to automatically analyze eye images, enabling early detection of eye diseases, assisted diagnosis, and health risk assessment. This type of software can quickly identify characteristics of various eye diseases such as diabetic retinopathy, glaucoma, and age-related macular degeneration. Its core value lies in improving screening efficiency and consistency, assisting doctors in making judgments, and helping to extend high-quality ophthalmological diagnostic capabilities to resource-scarce areas.

Multi-disease Fundus Imaging-assisted Diagnostic System has a promising future and is at a critical stage of evolution from 'single-disease assisted detection' to 'comprehensive multi-disease assessment and systemic health early warning.' The market growth drivers are clear: the increase in the global diabetic population and the aging population has driven up the rigid demand for early eye disease screening; continuous advancements in deep learning technology have improved the accuracy and reliability of algorithms; and supportive regulatory policies and exploration of medical insurance reimbursement are accelerating its clinical implementation. In the future, this field will exhibit three major trends: First, technological integration, which will be combined with portable devices and telemedicine platforms to expand screening scenarios from hospitals to grassroots communities and even homes; second,

functional diversification, extending from single eye disease screening to predicting disease progression and assessing overall health; and third, ecosystem systematization, integrating into the closed loop of 'prevention-screening-diagnosis-management' and becoming an important digital infrastructure for eye health and even chronic disease management systems.
