Multi-Dose Eye Dropper is a kind of medical devices, which is used to treat major eye problems and diseases for patients especially the elderly person.

Conventional Multidose systems are the so called "Three-Piece-Droppers", where preservatives are added to the dosing systems to reduce microbial contamination and growth in the product during use and storage. Preservatives though are best avoided since they can damage the ocular surface when used on a frequent basis, hence a device without the need of a preserving agent is highly recommended. The report only considers the preservative-free Multidose eyedropper device/system?which is based on pump or other mechanism.
