Abstracts

The global Multi Enzyme Blends market size is expected to reach \$ 2223 million by 2032, rising at a market growth of 5.7% CAGR during the forecast period (2026-2032).

Multi enzyme blends refer to formulated mixtures of two or more distinct enzyme types combined in specific ratios to achieve synergistic catalytic effects superior to those of individual enzyme preparations. In 2025, global multi enzyme blends production reached approximately 244,258 ton, with an average global market price of around USD 6,000 per ton. A factory gross profit of USD 1,500 per ton with 25% gross margin. A single line full machine capacity production is around 4,000 ton per line per year. The upstream is dependent on fermentation, enzyme stabilizers and processing chemicals. The downstream demand is concentrated in animal feed, biofuel production and industrial processing. Multi-enzyme complex from *Bacillus velezensis* strains use in bioethanol production because multienzyme complex allowed hydrolysis at mild temperatures near fermentation conditions, avoiding need for thermophilic yeasts. US market is driven by advanced biofuel infrastructure. China market is driven by expanding bioethanol production.
