The global Multi Frequency Vibration Sputum Extractor market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Multi frequency vibration sputum extractor is a medical device used to help patients with respiratory diseases such as chronic obstructive pulmonary disease (COPD), cystic fibrosis, and bronchitis clear lung mucus. This device is designed to provide targeted vibration to the chest wall, helping to release and decompose mucus, making it more prone to coughing. The device uses a multi frequency vibration mechanism to generate vibration, which is transmitted through the chest wall to the lungs. The vibration frequency can be adjusted according to the patient's needs, and the device is designed to be easy to use. Multi frequency vibration sputum extractors are usually used by patients at home under the guidance of medical professionals. This is a non-invasive and non pharmacological treatment option that helps improve lung function and quality of life in patients with respiratory diseases. Overall, a multi frequency vibrating sputum extractor is an effective and safe device that can help patients with respiratory diseases clear lung mucus. It can provide targeted vibrations at different frequencies, making it a universal and customizable treatment option.
