According to our (Global Info Research) latest study, the global Motor Control Contactors market size was valued at USD 715 million in 2023 and is forecast to a readjusted size of USD 953.1 million by 2030 with a CAGR of 4.2% during review period.

Motor control contactors are electromechanical relays used for switching a large amount of electrical power in industrial motors. The contactors typically protect electric motors from high voltage and current fluctuations and ensure optimal performance in heavy duty industrial applications.

Contactors are controlling devices that usually handle the heavy load of an electric motor. They are used for switching loads and are controlled by a circuit of much less power. They vary in size related to the power range dealt by the motor. They have ratings ranging from a breaking current of few amperes to a thousand ampere, depending on the motor that is connected to provide the protection. However, they are used for switching purposes and do not interrupt any short circuits like a circuit breaker.

The Global Info Research report includes an overview of the development of the Motor Control Contactors industry chain, the market status of Process Industries (IEC Contactors, NEMA contactors), Discrete Industries (IEC Contactors, NEMA contactors), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Motor Control Contactors.
