The multi-roller electronic belt scale is a weighing equipment used in material conveying systems. It is often used for material weighing and measurement in industrial production. This kind of weighing system is usually installed on the conveyor belt and is used to accurately measure the weight of materials during transportation. Currently, Siemens' Milltronics MMI belt scales consist of two or more MSI single idler belt scales installed in series. It provides high-precision continuous online weighing for various products in the primary and secondary industries. Schenck Process's MULTIBELT? BMP has feed rates of up to approximately 15,000 t/h, while MULTIBELT? BMC has feed rates of up to approximately 20,000 t/h.

Multi-roller electronic belt scales have the characteristics of high precision, real-time monitoring, automated operation, and high reliability. They play an important role in industrial production and can help enterprises achieve accurate measurement, real-time monitoring, and automated operations, and improve production efficiency and product quality.
