Abstracts

The global Multi-laser SLM System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Multi-laser SLM System is a SLM 3D printer with multiple lasers. SLM (selective laser melting) is one of the laser powder bed fusion technologies. It is a laser-based 3D printing technology in which metallic powder materials are selectively melted layer by layer to produce 3D objects. Since the build space is filled with an inert, i.e. inert, shielding gas such as nitrogen or argon, the metal runs little risk of oxidizing, which would render the printed components unusable.

This report studies the global Multi-laser SLM System production, demand, key manufacturers, and key regions.
