Abstracts

According to our (Global Info Research) latest study, the global Multi-Layer Blow Molding Machines market size was valued at US\$ 617 million in 2025 and is forecast to a readjusted size of US\$ 779 million by 2032 with a CAGR of 3.4% during review period.

Multi-layer blow molding machines are specialized equipment that use co-extrusion technology to combine two or more plastic melts with different properties (such as different resins or recycled materials) into a multilayer preform within a die, and then blow-form it into hollow products. Its core function is to manufacture plastic containers and products with multilayer functional structures (such as barrier, reinforcement, and aesthetics) in a single production step, overcoming the limitations of single-layer products in terms of barrier properties (prevention of oxygen/water vapor penetration), mechanical strength, cost control (allowing the use of inexpensive recycled materials as intermediate layers), and appearance design. Upstream suppliers mainly include manufacturers of special extruders and dies (such as co-extrusion system suppliers), manufacturers of multilayer plastic particles (such as EVOH and PA barrier materials), and suppliers of high-precision hydraulic/servo control systems. Downstream suppliers directly serve end-product packaging manufacturers, with core application areas including food and beverage (barrier preservation bottles), pharmaceuticals (sterile medicine bottles), and chemicals (corrosion-resistant containers). In 2025, the production of multi-layer blow molding machines will be approximately 5,000 units, with an average price of approximately US\$120,000 per unit, a gross profit margin of approximately 30%, and a single-line capacity of approximately 150 units per year.
