Multi-layer co-extrusion film is a plastic film extruded through a multi-layer extruder. Each layer uses different materials to make full use of the properties of various materials. This manufacturing process works by stacking multiple layers of plastic materials together to obtain a film with composite properties suitable for different application needs.

Multi-layer co-extrusion film is a plastic film extruded through a multi-layer extruder. Each layer uses different materials to make full use of the properties of various materials. This manufacturing process works by stacking multiple layers of plastic materials together to obtain a film with composite properties suitable for different application needs. The multi-layer co-extrusion process involves using an extruder to melt multiple plastic pellets and extrude them through a multi-layer extrusion head to form a film with multiple layers. As the demand for environmentally friendly materials increases, multi-layer co-extrusion process film manufacturers may tend to use sustainable materials such as degradable plastics or recyclable materials.
