Abstracts

According to our (Global Info Research) latest study, the global Multi-Layer Counter-Drone Defense System market size was valued at US\$ 10290 million in 2025 and is forecast to a readjusted size of US\$ 46732 million by 2032 with a CAGR of 14.6% during review period.

A Multi-Layer Counter-Drone Defense System is a comprehensive security architecture that integrates diverse detection and mitigation technologies to establish defense-in-depth against Unmanned Aerial Systems (UAS) of varying altitudes, speeds, and scales. The system is typically organized into three concentric echelons: Outer-layer Long-range Early Warning (utilizing Active Electronically Scanned Array (AESA) radars and RF spectrum monitoring), Mid-layer Precision Tracking (employing EO/IR sensors for visual identification and target locking), and Inner-layer Multi-modal Interception. By 2026 standards, mitigation techniques include "Soft-kill" (such as wide-band RF jamming and GNSS spoofing) and "Hard-kill" (including Directed Energy Weapons like High-Power Microwaves (HPM) and Lasers, as well as net-guns or interceptor drones). The quintessence of this system lies in its Command and Control (C2) platform, which orchestrates collaborative responses to ensure redundancy and robustness against both individual infiltrations and large-scale autonomous swarms.
