According to our (Global Info Research) latest study, the global Multi-Layer High-Frequency PCB market size was valued at USD 1686.4 million in 2022 and is forecast to a readjusted size of USD 2756.8 million by 2029 with a CAGR of 7.3% during review period.

High frequency, signals with a frequency band to be at least 300MHz (equivalent to wavelength no more than 1m), can be further classified into medium frequency (MF) and very high frequency (VHF) according to different wavelengths. Multilayer PCBs (Printed Circuit Boards) are a sophisticated evolution of traditional single-sided and double-sided PCBs. These advanced circuit boards consist of multiple layers of conductive material, separated by insulating layers (dielectrics), all interconnected to create complex electronic circuits. Multilayer PCBs offer several significant advantages compared to their simpler counterparts, making them integral to modern electronics.
