## Abstracts

The global Multi-Person Negative Pressure Isolation Tent market size is expected to reach \$ 731 million by 2032, rising at a market growth of 6.5% CAGR during the forecast period (2026-2032).

In 2025, global Multi-Person Negative Pressure Isolation Tent production reached approximately 119,737 units, with an average global market price of around US\$3,800 per unit.

The gross profit margin of major companies in the industry is between 26% – 44%.

In 2025, the global production capacity of Multi-Person Negative Pressure Isolation Tent was approximately 159,649 units.

Multi-Person Negative Pressure Isolation Tent is a temporary medical isolation facility that accommodates multiple people while maintaining negative pressure airflow. It helps reduce airborne contamination risk in emergency response, infectious disease control, field clinics, and public health preparedness.

The industrial chain includes upstream tent fabrics, frames, HEPA filters, blowers, sensors, ducts, zippers, and control units. Midstream covers tent design, sewing, frame assembly, airflow integration, leakage testing, and packaging. Downstream applications mainly include hospitals, quarantine sites, field clinics, emergency response, disaster relief, and public health reserves.

Public health emergency support, field medical rescue and epidemic prevention isolation requirements promote the upgrading of multi-person negative pressure

isolation tents. The negative pressure airflow isolation structure effectively blocks cross infection of pathogens and allows rapid deployment in outdoor environments. Modular assembly and supporting ventilation purification functions further improve emergency medical carrying capacity.
