## **Abstracts**

The global Multi Photon Direct Writing Lithography Machine market size is expected to reach \$ 164 million by 2029, rising at a market growth of 6.7% CAGR during the forecast period (2023-2029).

Multiphoton lithography (also known as direct laser lithography or direct laser writing) of polymer templates has been known for years by the photonic crystal community. Similar to standard photolithography techniques, structuring is accomplished by illuminating negative-tone or positive-tone photoresists via light of a well-defined wavelength. The fundamental difference is, however, the avoidance of reticles. Instead, two-photon absorption is utilized to induce a dramatic change in the solubility of the resist for appropriate developers.

This report studies the global Multi Photon Direct Writing Lithography Machine production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Multi Photon Direct Writing Lithography Machine, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
