Abstracts

The global Multi-point Laser Vibration Meter market size is expected to reach \$ 83.97 million by 2032, rising at a market growth of 5.7% CAGR during the forecast period (2026-2032).

In 2025, global production of multi-point laser vibration meters reached 2013 units, with an average selling price of US\$27,640 per unit. Multi-point laser vibration meter is an advanced non-contact optical measurement instrument based on the laser Doppler effect. It utilizes the Doppler frequency shift generated by the reflection of the reflected light after the laser beam is irradiated on the surface of a vibrating object due to the object's motion. By detecting this frequency shift, the vibration velocity, displacement, and acceleration parameters of the object at multiple locations can be accurately calculated. It can simultaneously measure the vibration information of multiple discrete points and has applications in modal testing and NVH of automotive/rail transit/aerospace structural components, vibration/acoustic characterization of micro-electroacoustics and MEMS devices, condition monitoring of precision machine tools/spindles and rotating machinery, vibration assessment of piezoelectric/ultrasonic transducers and medical devices, and material and structural health monitoring. The upstream of the industry chain includes narrow-linewidth laser sources (fiber lasers or semiconductor lasers + frequency stabilization/amplification), passive components such as optical fibers and couplers/isolators/beam splitters, key interferometric/demodulation components (AOM/EOM, balanced detectors, phase-locked loops and high-speed ADCs/FPGAs), optical heads and collimation/focusing components, and algorithms and software (spectral analysis, time-frequency analysis, modal analysis, coherent demodulation and noise suppression); the midstream is complete machine manufacturing; and the downstream enters test and measurement laboratories, automotive manufacturers, aerospace and research institutions, and precision

manufacturing and equipment manufacturers. Gross profit margins range from 30% to 55%.
