The lumpectomy robot is a high-tech product that integrates medicine, mechanics, biomechanics and computer science to solve the problem of anatomical precision in minimally invasive surgery and to perform difficult procedures that are difficult to perform with traditional lumpectomy. The lumpectomy robot surgery can reduce the larger movements of the surgeon's hand into fine, tiny movements at the end of the robotic arm through a master-slave remote control system, while eliminating the natural tremors of the surgeon's hand, complemented by a super 10x magnified 3D lumpectomy field of view, allowing for very fine surgical anatomy to be completed.
