The global Multi-port PSE Controllers market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A multi-port Power Sourcing Equipment (PSE) controller is a specialized electronic device used in Power over Ethernet (PoE) systems. PoE is a technology that allows both power and data to be transmitted over Ethernet cables, typically Cat5e or Cat6, to power and connect network devices, such as IP cameras, wireless access points, and VoIP phones, without the need for a separate power source. A multi-port PSE controller is designed to manage and control power distribution to multiple PoE-powered devices simultaneously, often in network switches or midspans.

This report studies the global Multi-port PSE Controllers production, demand, key manufacturers, and key regions.
