Multi probe nuclear radiometer is a device that uses multiple probes to detect and measure ionizing radiation in a given area. It is typically used in industries such as nuclear power generation, medical research, and environmental monitoring. Multi probe nuclear radiometer usually consists of multiple sensors for detecting ionizing radiation, displays or readers for displaying radiant intensity, and processors that can perform various functions such as data recording and alarm triggering. The measurement unit of radiant intensity is usually expressed in such units as count per minute (CPM), microsievert per hour (μ Sv/h) or millirem per hour (mR/h).
