Abstracts

According to our (Global Info Research) latest study, the global Multi-sensor EO/IR Surveillance System market size was valued at US\$ 8077 million in 2025 and is forecast to a readjusted size of US\$ 12953 million by 2032 with a CAGR of 6.9% during review period.

A multi-sensor EO/IR surveillance system is an integrated sensing system designed for security, defense, border protection, coastal surveillance, maritime security, critical infrastructure protection, wildfire detection, low-altitude security, and ISR applications. It typically combines visible imaging, low-light imaging, near-infrared, short-wave infrared, mid-wave infrared, long-wave infrared, thermal imaging, laser rangefinding, laser designation or illumination, image fusion, automatic target detection and tracking, gyro-stabilized pointing, pan-tilt control, edge AI analytics, network transmission, and command-and-control interfaces. The primary value of the system is to improve target detection, recognition, localization, tracking, and alerting under night-time, long-range, low-contrast, smoky, foggy, rainy, maritime, and cluttered environments. Common product forms include airborne EO/IR turrets, naval and land-based stabilized optronic systems, fixed-site long-range bi-spectral or multispectral PTZ cameras, panoramic infrared search-and-track systems, border and coastal surveillance stations, and EO/IR identification and tracking subsystems for counter-UAS and low-altitude security missions.

Based on our research, the industry should be understood as a system-level sensing market rather than a simple extension of thermal cameras or CCTV devices. Under the narrow scope adopted in this report, multi-sensor EO/IR surveillance systems cover integrated products that combine visible imaging, thermal imaging, infrared bands, laser

rangefinding, stabilized pointing, automatic tracking, image fusion, and command-and-control connectivity. The core value proposition is to provide reliable detection, recognition, tracking, and alerting in night-time, long-range, low-contrast, smoky, foggy, maritime, and cluttered environments. This scope is narrower than the broad universe of multispectral imaging, because agricultural remote-sensing cameras, scientific hyperspectral imagers, ordinary CCTV cameras, and pure detector modules are excluded from the revenue model. The broad vendor pool is large, but the core formal list is limited to companies with credible evidence of real OEM or system-level capabilities.

From the supply side, the competitive structure is highly layered. Chinese suppliers are expanding rapidly in thermal PTZ cameras, bi-spectral perimeter surveillance, wildfire detection, low-altitude security, and cost-sensitive public security projects. India is becoming a more visible market and supply base as defense indigenization accelerates, with local players gaining relevance in border and land-system applications.

Demand growth is being driven by a combination of defense modernization, border security, maritime domain awareness, critical infrastructure protection, counter-UAS requirements, wildfire detection, and low-altitude airspace security. The market is no longer dependent only on traditional airborne pods; fixed-site long-range PTZ systems, panoramicIRST systems, vehicle-mounted EO/IR stations, naval surveillance systems, and AI-enabled bi-spectral cameras are all contributing to incremental demand. From a technology perspective, competition is shifting from sensor hardware alone toward multispectral fusion, AI recognition, radar/RF/acoustic cueing, low false-alarm rates, open interfaces, and system-level reliability. The market outlook remains positive, but the industry will also face pricing pressure in lower-end thermal PTZ applications and scope ambiguity where EO/IR subsystems are bundled into larger defense or security projects.
