According to our (Global Info Research) latest study, the global Multi-sided Printed Circuit Board market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Multi-sided Printed Circuit Board is a printed circuit board (PCB) with multiple layers of circuit wiring. Compared with traditional double-sided circuit boards, multi-sided printed circuit boards have more layers and more complex circuit layouts, which can achieve higher density circuit connections in a smaller space.

According to our Semiconductor Research Center, the global total output value of PCB was about US\$ 81 billion in 2022. With strong drivers from new technology, such as AI, 5G and new energy vehicles, it is estimated that the PCB industry will continue to grow steadily in the next six years. Global PCB manufacturers are mainly located in China mainland, China Taiwan, Japan, South Korea, Europe and the United States. Among them, Chinese local PCB companies hold the biggest share.
