The global Multi Span Film Greenhouse market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Multi Span film greenhouse is a large-scale structure constructed using a series of connected spans or sections covered with a plastic film or polyethylene sheeting. It is designed to create a controlled environment for commercial crop production. The multi-span greenhouse typically has a rigid metal or PVC frame that supports the film covering, providing stability and durability. The film allows sunlight to penetrate while trapping heat, creating a warm and optimal growing environment for plants. The multi-span configuration provides a spacious and versatile growing area, accommodating multiple rows or tiers of plants. This type of greenhouse is commonly used in the cultivation of various crops, including vegetables, flowers, and herbs, allowing for extended growing seasons and higher crop yields.
