According to our (Global Info Research) latest study, the global Multi-spindle Automatic Tapping Machine market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

A multi-spindle automatic tapping machine is a machine used to automatically perform tapping operations. Tapping is a common metalworking process used to cut threads in threaded holes. Multi-spindle automatic tapping machines can perform tapping operations on multiple workpieces simultaneously or continuously, thereby increasing productivity and precision. This type of machine typically has multiple axes of work, each with a tapping tool and associated control system. The multi-axis design allows multiple workpieces to be processed at the same time, reducing the process cycle, and can complete multiple tapping tasks in one positioning, thereby greatly improving production efficiency. The machine's control system can precisely control the position, speed and depth of the tapping tool to ensure the accuracy and consistency of the thread. Multi-spindle automatic tapping machines are often used in manufacturing processes that require a large number of threaded holes, such as automotive parts, mechanical parts, aerospace parts, etc. The automated and highly integrated nature of these machines makes them ideal for high-volume production and high-precision requirements.
