Abstracts

The global Multi-station Hydraulic Press market size is expected to reach \$ 3403 million by 2032, rising at a market growth of 4.9% CAGR during the forecast period (2026-2032).

In 2025, global multi-station hydraulic press production reached approximately 5253 units, the average price is 450 k usd/unit. The multi-station hydraulic press is a hydraulic press equipped with a multi-station continuous automatic feeding device.

Market Concentration and Key Players:

Internationally, the market concentration of multi-position hydraulic press is relatively high, mainly concentrated on Europe and the United States and other developed countries. For example, Schuler and Bosch Rexroth and other large manufacturers; from the domestic point of view, multi-station hydraulic press still has a lot of room for development.

Manufacturing Processes and Market Trends:

The core of the manufacturing process of the multi-station hydraulic press lies in the integration of automation and precision control, the production process of the multi-station hydraulic press depends on the cooperative work of a multi-station automatic feeding system, a template moving mechanism and a product transfer device, and a precision guide system consisting of a guide sleeve and a guide rod is adopted to ensure the stamping precision. The technology realizes accurate closed-loop control of pressure, speed and position of each station through a servo pump control system, the repeatability of pressure and flow can be less than 1 percent, and the position control

accuracy can reach 0.1mm. Aiming at the problem of unbalanced load in the forging process, the equipment usually adopts a prestressed pull rod body structure, a multipoint displacement sensor to monitor the attitude of the sliding block in real time, and is equipped with a hydraulic deviation correction function to ensure the forming accuracy and the service life of the die.

In terms of market, China's multi-position hydraulic press industry has shown strong growth momentum. This growth is mainly due to the urgent demand for automated and efficient production equipment in industries such as automobile manufacturing (especially in the field of new energy vehicles), aerospace and electronic communications, among which the demand of automobile industry accounts for more than 40%. The future trend focuses on intellectualization and greening, for example, the equipment integrates the Internet of Things module to realize remote monitoring and fault diagnosis, and reduces energy consumption through compact design. Meanwhile, the policy support continuously promotes the transformation and upgrading of the industry towards high-end and energy-saving direction.
