## Abstracts

The global Multi-Storey Car Parks market size is expected to reach \$ 3639.6 million by 2029, rising at a market growth of 2.8% CAGR during the forecast period (2023-2029).

Global multi-storey car parks include XIZI Parking System, Wuyang Parking, Dayang Parking, Yeefung Industry Equipment and Tongbao Parking Equipment. Global top 5 companies hold a share about 20%. Asia Pacific is the largest market, with a share over 80%, followed by Europe and North America with the share about 10% and 4%. In terms of product, multi parking is the largest segment, with a share over 55%. And in terms of application, the largest application is Residential, with a share about 45%.

Multi-storey car parks, also called automated (car) parking system (APS), is a mechanical system designed to minimize the area and/or volume required for parking cars. Like a multi-story parking garage, an APS provides parking for cars on multiple levels stacked vertically to maximize the number of parking spaces while minimizing land usage. The APS, however, utilizes a mechanical system to transport cars to and from parking spaces (rather than the driver) in order to eliminate much of the space wasted in a multi-story parking garage. While a multi-story parking garage is similar to multiple parking lots stacked vertically, an APS is more similar to an automated storage and retrieval system for cars.
