Abstracts

The global Multi-storey Parking Lot market size is expected to reach \$ 3738.5 million by 2029, rising at a market growth of 2.8% CAGR during the forecast period (2023-2029).

Multi-storey parking lot refers to a new type of parking that uses space resources to park vehicles in a three-dimensional manner, saves land and maximizes utilization. The biggest advantage is that it can make full use of urban space, known as the 'energy saver' of urban space. The three-dimensional parking lot mainly uses a set of mechanical automatic lifting parking equipment, which is divided into several rows. The driver parks the vehicle on the steel plate, and the machine automatically lifts the vehicle to the appropriate level, and then moves the vehicle and the steel plate to the level. When picking up the car, the car owner only needs to hand over the card to the staff, and the staff presses the card position of the car on the device, and then presses start. The car will automatically drop to the ground.
