## Abstracts

According to our (Global Info Research) latest study, the global Multi-Tube Variable Area Flow Meter market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A Multi-Tube Variable Area Flow Meter is a device that measures the flow rate of fluids in a system by utilizing multiple tubes, each with a varying cross-sectional area. As the fluid flows through the tubes, the pressure drop across each tube changes depending on the flow rate. By measuring the pressure drop in each tube, the flow rate can be determined. This type of flow meter is known for its high accuracy and ability to measure low flow rates. It consists of a manifold that connects the multiple tubes and a pressure sensor to measure the pressure drop.
