Abstracts

The global Multi-Tube Variable Area Flow Meter market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

A Multi-Tube Variable Area Flow Meter is a device that measures the flow rate of fluids in a system by utilizing multiple tubes, each with a varying cross-sectional area. As the fluid flows through the tubes, the pressure drop across each tube changes depending on the flow rate. By measuring the pressure drop in each tube, the flow rate can be determined. This type of flow meter is known for its high accuracy and ability to measure low flow rates. It consists of a manifold that connects the multiple tubes and a pressure sensor to measure the pressure drop.
