Abstracts

The global Multi-Turn Rotary Actuators market size is expected to reach \$ 4318 million by 2032, rising at a market growth of 5.7% CAGR during the forecast period (2026-2032).

In 2025, global Multi-Turn Rotary Actuator output reached about 10 million units and global capacity of around 12 million units. The average price is about USD 285 per unit, with gross margins near 28%. Multi-Turn Rotary Actuators are electromechanical or hydraulic devices designed to convert electrical, pneumatic, or hydraulic energy into continuous rotational motion over multiple revolutions, typically used to operate valves (such as gate, globe, and sluice valves), dampers, and industrial positioning systems where precise control and high torque are required. The supply chain begins with upstream raw materials and core components including electric motors (AC/DC/servo), hydraulic systems, gear trains (worm gears, planetary gears), bearings, housings (steel, aluminum), and electronic control units (PCBs, sensors, encoders). Midstream, specialized actuator manufacturers integrate these components into complete systems with features such as torque control, limit switches, and smart diagnostics, often complying with industrial standards (e.g., IP ratings, explosion-proof certifications). Downstream, these actuators are distributed through OEMs, EPC contractors, and industrial distributors to end users across industries such as oil & gas, water and wastewater treatment, power generation (including nuclear and renewables), mining, marine, and chemical processing, where reliability, automation compatibility, and long service life are critical.
