The multi-view inner surface lens is an optical component used in industrial vision systems that can inspect the interior and bottom of holes or cavities. Compared to traditional lenses, this multi-view lens features a special design that captures image information of the target object from multiple different angles through a single lens, providing more comprehensive and three-dimensional visual data. Additionally, this lens is compact and primarily divided into two types: one for shooting inside the hole and another for shooting above the hole. It can be integrated into industrial cameras.
