The global Multifiber Cable Assembly market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A Multifiber Cable Assembly is a type of cable that contains multiple individual optical fibers within a single protective jacket. These fibers are usually bundled together and terminated at each end with connectors, allowing for easy and efficient installation and connection of multiple fibers at once. Multifiber cable assemblies are commonly used in applications where a large number of fibers need to be connected, such as data centers, telecommunications networks, and high-speed internet connections. They provide high bandwidth and transmit data at high speeds, making them ideal for demanding applications that require fast and reliable data transmission.
