Multifunction inverter microwave oven is a type of microwave oven that uses inverter technology to provide more consistent and even heating of food. Traditional microwave ovens use a magnetron to produce microwaves that are then used to heat the food. The magnetron generates a fixed power output and turns on and off during the cooking cycle to regulate the power level. This can result in uneven heating and overcooking or undercooking of food. Multifunction inverter microwave ovens use inverter technology to provide precise and even heating, and may also feature other advanced cooking technologies such as convection cooking and grilling.
