Multifunctional digital nuclear radiometer is a device used to detect and measure ionizing radiation in a given area. It is typically used in industries such as nuclear power generation, medical research, and environmental monitoring. Digital nuclear radiometer usually consists of a sensor for detecting ionizing radiation, a display or reader for displaying radiant intensity, and a processor that can perform various functions such as data recording and alarm triggering. The measurement unit of radiant intensity is usually expressed in such units as count per minute (CPM), microsievert per hour (? Sv/h) or millirem per hour (mR/h).
