According to our (Global Info Research) latest study, the global Multifunctional Microplate Reader (Plate Reader) market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The multifunctional microplate reader (plate reader) is a kind of experimental equipment used for biochemical analysis. It is mainly used to measure the content of trace substances in biological samples. It has absorbance and fluorescence detection functions, can be applied to different types of biomolecules, and is widely used in the biomedical field.

Multifunctional microplate readers (plate readers) are usually used to detect and analyze optical density or fluorescence intensity of various biological reactions in microplates (also called enzyme plates). A microplate is a plastic plate with multiple small wells. Each well contains a biological sample to be detected. By adding specific substrates and reagents, a biological reaction is performed to produce a measurable signal. Multifunctional microplate readers can accurately measure and analyze these signals to determine the content and activity of target substances in the sample.
