Abstracts

The global Multifunctional Microplate Reader (Plate Reader) market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Multifunctional microplate readers (plate readers) are usually used to detect and analyze optical density or fluorescence intensity of various biological reactions in microplates (also called enzyme plates). A microplate is a plastic plate with multiple small wells. Each well contains a biological sample to be detected. By adding specific substrates and reagents, a biological reaction is performed to produce a measurable signal. Multifunctional microplate readers can accurately measure and analyze these signals to determine the content and activity of target substances in the sample.

The multifunctional microplate reader (plate reader) is a kind of experimental equipment used for biochemical analysis. It is mainly used to measure the content of trace substances in biological samples. It has absorbance and fluorescence detection functions, can be applied to different types of biomolecules, and is widely used in the biomedical field.
