Abstracts

The global Multifunctional Skin Tester market size is expected to reach \$ 2887.4 million by 2030, rising at a market growth of 4.3% CAGR during the forecast period (2024-2030).

According to data from the International Society for Aesthetic Plastic Surgery (ISAPS), in 2021, the number of surgical plastic surgery procedures worldwide will be approximately 12.84 million, a year-on-year increase of 18.5%; the number of non-surgical plastic surgery procedures will be 18.6 million, a year-on-year increase of 19.9%. Among them, the top three countries with the most number of treatment courses are the United States, Brazil and Japan, with 7.35 million, 2.72 million and 1.75 million respectively. Judging from the number of plastic surgeons, the United States, Brazil and China have the largest number of physicians, accounting for 17%, 13.6% and 6.8% of the global total respectively. ASAPS data shows that the overall size of the U.S. medical beauty market in 2020 was US\$9.308 billion, a year-on-year increase of 14.63%.

Among them, the market share of surgical aesthetics is US\$6.177 billion, accounting for 66.36%; the market size of non-surgical aesthetics is US\$3.131 billion, accounting for 33.64%. The U.S. medical aesthetic market is generally stable, and the market share of non-surgical aesthetic medicine continues to rise significantly. The penetration rate of China's medical aesthetics industry is low. Compared with mature markets such as Europe, the United States, Japan and South Korea, the industry as a whole still has much room for improvement. The "2021 Medical Beauty Industry White Paper" released by SoYoung shows that the scale of China's medical beauty industry in 2021 will be approximately 184.6 billion, a year-on-year increase of 21.6%.

The skin analyzer has a variety of functions with beautiful interface and comprehensive practical functions. It should also have several major analysis modules and can

accurately analyze skin oil, moisture, pigmentation, pores, and skin age. The moisture data is directly obtained by obtaining the moisture data under the stratum corneum of the skin, and the data accuracy is high.
