Abstracts

According to our latest research, the global Multilateration (MLAT) System market size will reach USD 251 million in 2031, growing at a CAGR of 4.0% over the analysis period.

A Multilateration System is a passive positioning technique that determines the location of a signal-emitting source by measuring the time differences of arrival (TDOA) of its signals at multiple, geographically dispersed receivers. Unlike radar, it does not actively illuminate the target—rather, it “listens” for transmissions (e.g., transponder pulses, radio beacons, wireless signals) and computes position from timing data.
