Abstracts

According to our (Global Info Research) latest study, the global Multilayer Chip Fixed Inductor market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

MultiLayer Chip Inductor uses ferrite slurry (soft ferrite ceramics) and conductor slurry to alternately print, stack and sinter to form a closed magnetic circuit; MLCI adopts thick film multilayer passivation technology and lamination production process to achieve ultra small surface mounting (the manufacturing process is similar to MLCC). The specific structure is shown in the figure below. The laminated chip inductor is generally small in size, convenient for installation and circuit miniaturization, so it is widely used in the single board power filter circuit.
