According to our (Global Info Research) latest study, the global Multilayer Chip Temp Sensing NTC Thermistor market size was valued at US\$ 99 million in 2025 and is forecast to a readjusted size of US\$ 166 million by 2032 with a CAGR of 7.8% during review period.

In 2025, global Multilayer Chip Temp Sensing NTC Thermistor production reached approximately 5343 M Units, with an average global market price of around 18 USD per K Units.

Multilayer Chip Temp Sensing NTC Thermistor refers to a chip-type negative temperature coefficient thermistor designed for automotive electronic applications. Its resistance decreases as temperature rises, enabling temperature sensing, temperature compensation, and over-temperature protection in automotive systems. These components are typically surface-mounted on PCBs, supplied in compact chip packages.

Multilayer Chip Temp Sensing NTC Thermistors, with their unique characteristics of miniaturization, wide temperature range stability, high sensitivity and fast response, and automotive-grade high reliability, perfectly adapt to the harsh operating conditions and high-density PCB mounting requirements of automotive applications. They precisely solve the industry pain points of traditional through-hole components, such as large size, shock and temperature difference resistance, slow response, insufficient consistency, and difficulty in adapting to automated mass production. At the same time, they meet the core requirements of high precision, high stability, and high safety of temperature sensing in the three-electric systems of new energy vehicles. At the

industry driving level, the continuous increase in the penetration rate of electric vehicles, the increasing complexity of automotive electronic architecture, and the upgrading of battery thermal management safety requirements are jointly creating strong growth momentum. In the future, with the deep integration of automotive intelligence and electrification, the application scenarios of products will continue to expand, the market penetration space is vast, and the growth potential is huge, making it a highly valuable core track in the field of automotive electronic temperature control.

The upstream raw materials for Multilayer Chip Temp Sensing NTC Thermistors mainly include MnO₂, MnO, NiO, CoO, CuO, FeO, etc. Typical suppliers include Umicore, Sumitomo Metal Mining, Eramet, Jinchuan Group, Huayou Cobalt, GEM, Xiangtan Electrochemical, American Elements, Kojundo Chemical Laboratory, etc. The downstream applications are mainly in automotive battery management systems, power electronics, automotive lighting, and other fields.

The single-line production capacity of Multilayer Chip Temp Sensing NTC Thermistors varies greatly depending on the product model, technical solution, degree of automation, and yield. The overall gross profit margin of the industry is in the range of 30%-40%.
