Abstracts

According to our (Global Info Research) latest study, the global Multilayer Ferrite Beads (MFB) market size was valued at US\$ 745 million in 2024 and is forecast to a readjusted size of USD 1162 million by 2031 with a CAGR of 6.6% during review period.

In the transmission system, noise is classified in two ways: one is differential mode noise and the other is common mode noise. Ferrite beads are used to clean differential mode noise generated from either the signal line or power line circuit. Chip beads are used to absorb high-frequency noise and transform it into heat, to filter out the unwanted signal (noise).

Increasing Demand for Electronic Devices: Multilayer ferrite beads are commonly used in electronic devices to suppress electromagnetic interference (EMI) and noise. With the proliferation of electronic devices across various industries, the demand for MFBs has been on the rise.

Growing Adoption in Automotive Electronics: The automotive industry has seen a significant increase in electronic components and systems integrated into vehicles. Multilayer ferrite beads play a crucial role in ensuring the reliable and efficient performance of these automotive electronics, leading to higher demand in this sector.

Expanding Telecommunication Infrastructure: With the expansion of telecommunication networks, there is an increased need for components that can mitigate EMI and improve signal integrity. MFBs have been widely used in telecommunications infrastructure to achieve these goals.

Miniaturization and Integration: The trend of miniaturization in electronics has also influenced the MFB market. Manufacturers have been developing smaller and more compact MFBs to cater to the needs of portable and handheld devices.
