The global Multilayer Microcapsule Omega-3 Algae Oil Powder market size is expected to reach \$ 715 million by 2032, rising at a market growth of 7.9% CAGR during the forecast period (2026-2032).

Multi-layer microencapsulated Omega-3 algae oil powder is a powder form in which Omega-3 fatty acids (usually derived from algae oil) are encapsulated in a multi-layer protective shell through microencapsulation technology. This technology can effectively protect Omega-3 fatty acids from environmental factors such as oxidation, light and heat, and extend their stability and shelf life. Microencapsulation refers to the encapsulation of active substances (such as Omega-3 algae oil) in tiny particles made of one or more materials (usually natural or synthetic polymers, lipids, etc.). The multi-layer structure usually provides different protection effects through different capsule layers, and can accurately control the release rate of Omega-3. This microencapsulated powder form of Omega-3 algae oil is widely used in the fields of health foods, nutritional supplements, food additives, etc., especially for providing high-quality plant-derived Omega-3 fatty acids, suitable for vegetarians or consumers who are sensitive to marine sources. Through this technology, the absorption efficiency of Omega-3 is improved, and the taste and smell of the product can also be better controlled.
