Abstracts

The global Multilayer MLCC Release Film market size is expected to reach \$ 5569.8 million by 2029, rising at a market growth of 6.2% CAGR during the forecast period (2023-2029).

Mainly due to the continued expansion of MLCC demand driven by 5G and vehicle electrification, downstream companies in the market have proposed production expansion plans in recent years.

Multilayer MLCC Release Film is a release film obtained by coating a silicone release agent on the surface of a PET film. MLCC release film is used in the cast coating process in the MLCC production process to carry the clay layer. During the entire process, the MLCC release film is a highly consumable product. Its uniform thickness, good peelability and smoothness ensure that it can be easily peeled off after drying without damaging the dielectric layer for subsequent use in MLCC lamination.
